Stûv Stories

Welcome to the world of Stûv! Our products are intended to be sources of warmth and conviviality. The story they tell is simple and warm, sober and effective. A story where the aesthetic becomes functional and objects blend into the architecture. Quality and purity are the watchwords for Stûv. To improve is to simplify, humanise the design, innovate unceasingly until pleasure and efficiency are in perfect harmony. Stûv, the essential fire

Stûv Stories +Stûv tulp – Burners

Double burner or 'wood burner'

Double burner

- + Double row of gas injectors: view of fire over the whole depth
- + Heat adjustable for optimum comfort and an extended heating season
- + "Wave" programme to shape the flame and reduce consumption by 10 to 45 %

'Wood-effect burner'

- + Double row of gas injectors: view of fire over the whole depth
- + Looks like a real wood fire
- + Heat adjustable for optimum comfort and a longer 'heating season'
- + "Wave" programme to shape the flame and reduce consumption by 10 to 45 %

Tulp Fires are fitted with a double burner or a "wood burner" with both burner types the flames are distributed through the whole depth of fire box giving a truly authentic appearance. The 'Wood effect burner' is arranged in such a way that the smaller flames of the front burner are complimented by the taller flames of the rear burner, this coupled with highly realistic ceramic logs provides an experience which is close to that of a real wood fire. Both burner types have the added advantage of using both burners together or only one which reduces by half the heat output and maintains optimum efficiency. Convenient for using your fire in all seasons!

Anti-reflective glass

Tulp fires are available as an option with Anti-reflective glass, as the name suggests most reflection is avoided and concentrates your attention on the fire.

Anti-reflective glass

For another example, see page 52

Glass

All fires photographed in this brochure are with standard glass with the exception of pages 27 & 52

Internal finish

- 1 Logs as standard
- 2 White stones (option)
- 3 Anthracite stones (option)

1

2

3

Back panel

- 1 Black steel as standard
- 2 Black glass (option)
- 3 "Piet Boon" iron strips (option)

Stûv Stories +Stûv Under-Cover

- + Finishing frames providing fluid shapes
for perfect integration into the architecture
- + Withstands heat and does not crack
- + Easy to install

Model shown: Stûv B-100 double-aspect + UC frame

Under-Cover, shapes which blend into the architecture

What you see: Magnificent fires with curvaceous shapes which blend perfectly into the decor and architecture. What you don't see: Structures which are manufactured in a heat resistant ecological composite material. This allows for a seamless installation of your fire into the wall, these frames are light and easy to install and can be painted in your chosen colour.

Model shown: Stûv B-35 + standard finish

Stûv Stories +Stûv B-35

- + Double burner
- + Available in single or double aspect
- + Standard finish, steel frame or Uncer-Cover

Distinction as manufacturing brand

- + 'Wood-effect burner'
- + Rear panel in iron strips
- + Removable frontal strips (option)
- + Design: Piet Boon

Model shown: Stûv B-60 PB + anti-reflective glass

Stûv shares your desire for beautiful things. This implies the use of fine materials, attention to detail and purity of form. The walls, frames and facades in iron strips of the Piet Boon versions reveals even better the personality of your interior, with no concessions in terms of performance or efficiency.

Model shown: Stûv B-100 H PB wide + removable front strips

Stûv Stories +Stûv B-100 H 3 sided

The Stûv story is one of a passion for fire, of a lively discussion taking place while gazing at the flames. Memorable moments spent by a fire with pure lines, simply believing in timeless objects. The shape of Tulp gas fires combines the beauty of the flame with architectural integration. This is the result of a hidden technique which gives you the full benefit of the fire. The shapes blend into the architecture and prolong the presence of the fire. This is what we constantly strive to do, for the sole purpose of making your gas fires a central and eminently precious element in your interior.

Combustion & convection

+ Stûv gas fires are designed to be connected to a concentric stainless steel balanced flue system. The fires are room sealed and take the oxygen required for combustion through the outer wall of the flue system. The heat from the products of combustion being expelled by the centre pipe warms the incoming air in the outer pipe too.

+ Stûv gas fires are able to be ordered for LPG too, please specify this with your retailer at point of order. The flame visuals, output and efficiency are different when using LPG.

+ Stûv gas fires can be installed with an optional convection casing which can be used to capture and channel the convected heat.

Remote control

- + All Stûv gas fires are remote controlled as standard, the hand-set contains a thermostat as well providing access to the automatic programs and timer functions.

- + The fires can be fitted with a WIFI module to offer control functions from a smart phone or tablet (only on local home network).

The constant search for improvement...

Stûv invests enormously in research and development in both its own laboratory and thanks to its partnerships with specialists in the field of combustion. Each detail is important in optimising the performance of the gas fire. Stûv devices meet the most stringent standards in terms of respect for the environment. We prioritise ergonomics and simplicity at all stages – installation, use, maintenance – so that every owner can use their Stûv in an optimal manner exactly how they want it. This is the reason we provide detailed installation instructions, we select our sales network and organise training sessions for our retail and installation partners.

The Stûv guarantee

- + Stûv gas fires are recognised for their design and performance. They are also robust, reliable and durable.
- + The gas fires and their components are made in Europe to the highest standards. A well-maintained Stûv fire is for life.

All the photos in this catalogue were taken with fires running on natural gas.
